- 3. 180.4 ft of Main Piping + 49.2 ft of Branch Piping.
- 4. 16 ft of Main Piping + 131 ft of Branch Piping.
- 5. At least one BD Unit is required for system operation; a maximum of two can be installed per ODU with use of Y-branch accessory (PMBL5620).
- Sound Pressure levels are tested in an anechoic chamber under ISO Standard 1996.
- 7. All power/communication cable to be minimum 16 AWG from the outdoor unit to the BD unit and 18 AWG from the BD unit to the indoor unit.
- 8. All power/communication cable to be 4-conductor, stranded, shielded and must comply with applicable local and national code.
- 9. Power wiring cable size must comply with the applicable local and national code 10. See Engineering Manual Capacity Tables for ODU sensible and latent capacities.
- 11. See Engineering Manual Combination Tables for allocation of ODU rated capacity to each connected IDU when all are calling for full capacity. Allocation percentages should be applied to ODU capacity at design conditions.
- 12. This data is rated 0 ft above sea level, with 115 ft of refrigerant line and a 0 ft level difference between outdoor and indoor units. All capacities are net with a combination ratio between 95 - 105%.
- 13. Must follow installation instructions in the applicable LG installation manual 14. See Engineering Manual Capacity Tables for ODU capacity at design condition.
