Notes:

- 1. Rated capacity is certified under AHRI Standard 1230. Ratings are subject to change.
- 2. When entering water temperature is lower than 59°F, variable water flow control kit PWFCKN000 is required. When entering water temperature is lower than 50°F, water solution must be minimum 45% antifreeze.
- 3. Sound pressure levels are tested in anerchoic chamber under ISO 3745 standard.
- 4. Value is calculated as follows: Delta T= Total Heat of Rejection/(Nominal Flow Ratex500)
- 5. Communication cable between WSU, IDU(s) / HRU(s), and Central Controller must be a minimum of 2-conductor, 18 AWG, twisted, stranded, and shielded. Ensure the communication cable shield is properly grounded to the WSU chassis only. Do not ground the communication cable at any other point. Wiring must comply with all applicable local and national codes.
- Power wiring is field provided, solid or stranded, and must comply with all applicable local and national codes.
- 7. LG requires that LATS software be used on all projects to ensure correct line sizing. Designer must verify the shop drawing design against as built design using LATS. Contractor must also use LG manufactured Y-Branch and Header Kits only.
